

FUEL-CONSUMPTIONS SOLUTIONS : PROFESSIONAL USERS KEEP ON INVESTING FOR THE FUTURE PREDICTED RAISE OF FUEL.

Ecovia's innovations

Ecovia supplies fuel-consumption solutions in transportation and work on land and at sea : motos, cars, buses, trucks public works engines as well as shipping, fishing and cruising sectors.

Ecovia's range of products : flowmeters with special screens and USB key , possibly coupled with Gprs solutions, antithefts systems and original and exclusive Opti+ fuel saving systems, are designed for use by professionals customers who are heavy users of thermal engines ranging from 150HP to 10,000HP (including diesel and ethanol).

SEPTEMBER 2009 : AN OPTI+4D AND A FLOWMETER FS20 ON A PASSENGER BOAT- Brittany-France (the Opti+4D system is situated below in the center (4 grey cylinders through which the fuel is turning around a special cartridge with magnets-improving the fuel combustion- patenting system and DNV certification obtaining)

Despite of technical efforts from part of the motorists, the ask for improving efficiency is raising. All professionals know the fuel price will not stay at such a low level in a near future. So they want to take advantage to prepare, at least try and invest in all proceeds such as Ecovia's ones.

This young company (created in 2005) has always focused on a total fuel-savings approach through two range of products :

- Flowmeters : that gauge the impact of fuel-consumption reduction measures that have already been or will be taken
- Fuel-consumption reduction processes OPTI+ : following a personalised study , this system will allow to reach between 5% and 10% of fuel savings over six months with a satisfied or money-back guarantee contract, that Ecovia is the only one to propose to its customers.

The principle of Ecovia's OPTI+ fuel saver, which is attached to the engine's feed, is primarily based on the effect of magnets upon fuel consumption. The return on investment is of about 1 year, and offers an actual average lifetime of eight years. Recently, a maritime expert followed two trawlers, one with and one without an Opti+ system, operating in exactly the same conditions. The one with Opti+ achieved to save more than 6500 liters on 4 months.

With its original way of working (a rigorous follow of the efficiency) , Ecovia has just launched three new original products :

- a new screen IXECO which allows , through a USB key with code or/and GPRS option to get the fuel consumption figures in euros/miles or liters/hours, along with environmental factors (wind, speed, etc...) with a maximum reliability.
- a new range of flowmeters : ECOVIA also proposes its marine customers a range of DNV certified flowmeters .
- a new fuel saving system : OPTI+4D (for marine motors from 2000 to 6000 hp).

ECOVIA® is beginning this new year on a raising market : a growing business and an innovative policy, especially in marine field, along with maintaining a high level of quality (for example DNV certification is studied for its Opti+ saving range). Ecovia searches professional dealers in France and abroad .

About ECOVIA® :

- Ecovia is just certifying its Opti+ range of saving systems by DNV. So it will be the only provider of this kind of product in marine sector with such certification.
- More information and references on www.ecoviasystem.fr .A complete press book is available along with the latest maritime reference (quoted above).
